DETAILED ACTION

Specification

The abstract of the disclosure is objected to because of undue length. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 8-14 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 8, the word "means" is preceded by the word(s) "anchor" in an attempt to use a "means" clause to recite a claim element as a means for performing a specified function. However, it is unclear whether the "means" of line 11 is a means for anchoring or a means for deploying.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States

only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-2, 7, 8, 14, 19-32 and 42 are rejected under 35 U.S.C. 102(e) as being anticipated by Langberg et al. Langberg et al. discloses a device comprising a first distal anchor and second proximal anchor (p 7, lines 9-11) connected to each other by a fixed length flexible connecting member (58) (p 17, lines 15-16). The connecting member can comprise a "bottomed out" spring (p 18, lines 10-16). A tether (64) extends through a catheter lumen (p 18, lines 19-21).

Claims 1-6, 8-13, 15, 17, 33-37, 39 and 43 are rejected under 35 U.S.C. 102(e) as being anticipated by Solem et al. Solem et al. discloses a device comprising a first distal anchor and second proximal anchor (Fig. 10) connected to each other by a fixed length connecting member (8). The anchors are self-deploying upon release (col. 4, lines 24-26). The first anchors face the opposite direction of the second anchors so that the second anchors are only movable in a proximal direction after engagement (Fig. 10). The connector can comprise a metal (col. 3, lines 38-42), which the applicant discloses is a rigid material (p 2, lines 28-30). The connecting member acts as a spring (Fig. 5 vs. Fig.6).

Claims 1, 15-18, and 37-41 are rejected under 35 U.S.C. 102(e) as being anticipated by Pai et al. Pai et al. discloses a device comprising a first distal anchor loop and a second proximal anchor loop (Fig. 8A) connected to each other by a fixed length connecting member (4). The loops may have a cardiac lead passed through them.
